

SLIDING SECURITY DOORS

All around security, safety and comfort. Custom built for your home

Give your home and family the best all around protection and comfort with Havengard's patented sliding security screen doors. Havengard's stainless steel mesh security doors make your home look great from the outside and feel totally secure from the inside - without the need for unsightly bars and grilles. Every Havengard® sliding security system is custom designed to meet your needs and includes Havengard's unique 'Grip Lock' technology for all around protection.

A Havengard® home is not only more secure it is more comfortable. Havengard® security sliding doors allow you to let the cooling breeze in whilst keeping intruders, insects and heat out.

All Havengard® sliding security doors can be applied to any door brand, are available in a wide array of colours and are fitted with a triple point security lock and exclusive full height interlocks.

ALL AROUND SECURITY PLUS

Havengard® screens can also provide a wide range of additional benefits:

Fire resistance against flying embers up to and including BAL 40

Cyclone and storm protection against flying debris

Prevent insects and other pests entering your home

Prevent falls from balconies and windows

ALL AROUND STRENGTH WITH GRIPLOCK

All Havengard® doors feature the patented 'Grip Lock' mesh retaining system. 'Grip Lock' folds and hooks the stainless steel security mesh continuously all around the window or door frame. This unique continuous extra strong interaction between the mesh and the frame means the stainless steel mesh will not pull out of the frame even after a prolonged attack. **No other system includes this technology.**

Havengard® is tested at the NATA certified facility Azuma to AS5039-2008 and has passed the following tests

Jemmy Test

Dynamic Impact Test

Knife Shear Test

Extreme Salt Spray Test
